TITLE : RECORDING AND REPRODUCING
DEVICE, AND TERMINAL EQUIPMENT

SOLUTION: This recording and reproducing device 50 is provided with a communication part, a reading part, a storage part, a controlling part and an outputting part. The communication part transmits and receives data to/from an information center 60 in which plural additional information are stored. The reading part reads data recorded in a recording medium 55 in which plural data and list data of plural data are recorded. The storage part stores data read out from the medium 55 by the reading part. The control part reads additional information corresponding to the medium 55 from which the reading part reads data from the center 60 by the communication part and writes it in the storing part as additional data of the medium 55 read by the reading part. An outputting part outputs data stored in the storage part and additional data.
